Summary

Spot and Derivatives trader with extensive hands-on experience in programming (languages: C#, Python), quantitative research and systematic trading, and derivatives structuring. Built and implemented various types of trading models and algorithms: market making, order execution algorithms, decision-based trading, and statistical arbitrage. Comprehensive knowledge of sell-side IT infrastructure, market technical microstructure, and risk management systems. Developed tools for manual and autonomous trading, auxiliary tools for discretionary trading, multithreaded algorithms, high-frequency trading, client-server applications, and machine learning techniques implementation. Continuously focused on adding value to everything that is within reach, deep-diving into every aspect. Visa status: legally authorized to work in the US.
